

# NIBIRU CATAclysm IMMINENT: INTERVIEW WITH DR. RONALD SHIMSchUCK

Last week, Dr. Ronald Shimschuck provided exclusive information on the impending Nibiru crisis, a situation worldwide governments are desperate to conceal while discrediting—and in some cases disappearing—all credible whistle blowers. Naturally, those with genuine scientific knowledge have been reluctant to speak on the record

about Nibiru, also referred to as Planet X. Lately, however, several professional astronomers have risen from the shadows to voice their concerns regarding Nibiru and its potential effects on planet earth. One can only speculate as to why, now, after all these years, prolific members of the scientific community are choosing to disclose “highly classified” information at great risk to their safety, and in doing so also place their loved ones in a perilous position. Please take the time to read our previous article, **Nibiru Is Near, says Astrophysicist Ronald Shimschuck**, published on 8 May 2016, and also reprinted with our permission at [Galacticconnection.com](http://Galacticconnection.com)

In the below transcript excerpt, Dr. Ronald Shimschuck, a former NASA employee who holds a double Doctorate in Aeronautical Engineering and Astronomical Sciences, confronts his own demons in a sincere and heartfelt disclosure that even the most craven human being can ill afford to ignore.

**Someonesbones:** Dr. Shimschuck, thank you once again for taking the time to speak to us about this very important subject.

**Dr. Shimschuck:** You're welcome. I'm always a bit nervous about this but it's the right thing to do.

**SB:** Let's start with some basics. Why have you gone public?

**DS:** I still wrestle with that decision every day. And, to be frank, I'm by no means certain going public, as you say, has any benefit. It may, it may not. As a scientist, I spent much of my life seeking simple answers to difficult questions. Going public is the most difficult question I've faced. I'm dedicated to the truth, and for a long time I helped conceal a truth that could cost millions or billions of lives. Like many of my colleagues, I feared for my life, for that of my beloved Darlene, God rest her soul—she passed away a year ago. Now I have no living relatives. And my conscious could no longer bear the burden of guilt. I had to go public, for humanity.”

**SB: Are you saying “they” threatened your family if you exposed information on Nibiru?**

**DS:** They didn't have to explicitly say it; the threat was implied. This reason, as I believe a previous interviewee pointed out, is why people with knowledge don't make deathbed confessions: for fear some harm will come to loved ones. There was no doubt in my mind that had I talked a year or two ago, that they would have got to her first, to make me suffer, then taken care of me. They can't take her from me now.

**SB:** How do you explain the sudden surge of astronomers now willing to talk about Nibiru. Many do have living families. Aren't they jeopardizing their families' safety?

**DS:** Although I can speak only definitively for myself, I can speculate: In a row of dominoes, when one falls, they all fall. Here we have the opposite, one man standing up after another, essentially reinforcing its companion. Safety in numbers, that sort of thing. I doubt I would have come forward if others, like Dr. Eugene Ricks, hadn't taken that first, bold step. More importantly, we have reached a precipice; five, ten, thirty years ago, world governments had a “safety net,” the mistaken belief they could conceal the truth almost indefinitely. Well, that time has elapsed, and though they hate to admit it, I believe they realize the truth about the interloper cannot be hidden much longer.”

**SB:** That makes sense. How long has the government(s) known about Nibiru? And have they all worked together to keep it secret?

**DS:** First, I believe they've known since the 50s, but I'm positive since the early 80s. And, yes, major world governments, each preparing in its their own ways, conspired against the world's population to keep this the most carefully kept secret in the history of so-called secrets. The big three—US, Russia, China—have been in “Secondary Protocol” for some time, meaning their underground living quarters are prepared, secondary and provisional governments stand ready, and I could talk for hours on that alone.

**SB:** Perhaps if we have the chance for another interview. In our previous discussion, you said that chem-trails are one method via which the powers that be try to hide Nibiru. To play Devil's advocate, you previously stated Nibiru is still far enough away that it's visible only at high altitudes in the southern hemisphere, with powerful optics. So why would they need to currently employ chemicles? And how do you respond to detractors who say that chem-trailing has a different purpose, like, say, to poison the population?

**DS:** I'll answer the second part of the question first: It's entirely possible that atmospheric aerosol spraying serves multiple purposes. I really don't know. But nothing surprises me anymore. I know as fact one reason is to impede, obscure, and delay visibility of the Nibiru system. This I know because I saw documentation on the subject. They are spraying now—have been for years—because the chemicals, and I wasn't privy to the precise chemical composition, translucent, reflective nano fibers act energetically with aluminum oxide, another ingredient, to create a barrier, screen, or “haze” to limit visibility of both natural and artificial optics. There is marginal degradation over time, but the compound persists in the atmosphere and continues to build upon itself.

**SB:** As simply as possibly, what is “Nibiru?”

**DS:** It is a generic or catch-all term for what I and others refer to as “the Nibiru System,” essentially a solar system of its own which will intersect with ours. At its heart is a brown dwarf star approximately one-eighth the size of our sun. The brown dwarf is orbited by seven planets or moons, some smaller than our moon, some larger than earth. Of greatest concern is the third planet of this system—several times earth's mass with a nickel-iron core. It is predicted this planet will pass within 0.3 AU of earth.

**SB:** How far is that in layman's terms?

**DS:** 27886742 miles, or one-third the distance from earth-to-sun

**SB:** So no direct impact. We know your time is limited so I'll finish up quick here. Worst and best case scenarios?

**DS:** Worst: Extinction Level Event. Nothing on the planet will survive. Not even bacteria. Best: Pole Shift accompanied by rising sea levels across all major bodies of water, volcanic eruptions, Tsunamis washing hundreds of miles inland. Magnitude 10 earthquakes along all major fault lines; six-to-eight in many other areas. Basically, all the worst parts of the Bible.

**SB:** When will it be here?

**DS:** Views differ. Some colleagues and I agree that events will unfold between September and December of 2016.

**SB:** As always, thank you for your time, Dr. Shimschuck. I hope we can chat with you again at least once more.

**DS:** Me too.
